Two leaves gate automation

Jack motorization

These motorization, is exclusively reserve to rigid gate of type « steel », it is a discrete aesthetic solution.

Articulated arms motorization

Flexible to all equipments, it produces a natural movement which respect the structure of your gate. This is one of the most silence solutions.

Sliding gate motorization

This type of motorization s can adapt to different equipments and can fit gates of up to 8 m wide.

VIDEO ENTRY SYSTEM

A video entry kit consists of:

- An indoor monitor with screen allowing the resident to see, contact the visitor who rings, ordered the gate for pedestrian and the motorized gate
- A roadside panel (waterproof and dustproof) with intercom and camera allowing visitors to communicate with residents
- An electric lock for automatic opening and closing of the gate for pedestrian

The main functions of a video entry are:

- Contact a visitor (sound and image)
- Grant access to visitors without leaving your home (electric lock/ motorized gate)
- Save the passage of all visitors either image or video
- View and record events taking place outside of your home (with the Day / Night camera from the door station)
